Objective:

Enthusiastic developer with a strong focus on Data Structures and Algorithms, Data Analytics, IoT, and Application Development, supported by practical exposure to AI and Machine Learning. Passionate about writing clean, maintainable code and continuously learning emerging technologies such as image processing and IoT.

Areas of Interest:

- Machine Learning
 - Data Science
 - Software Development
-

Education:

- Bachelor of Engineering (CSE(AIML)) – CGPA: 8.30 (5th Sem), Sri Krishna College of Technology, Coimbatore.
 - HSC(April 2023) – 91%, Malar Matric Higher Secondary School, Namakkal.
-

Skills:

Technical Skills

- **Programming:** DSA using Java, C++, python
- Machine Learning, JDBC
- **Database:** SQL
- **Version Control:** Git, GitHub
- **OS :** Linux (Command Line Basics)
- **Visualization:** Excel, Power BI

Soft Skill

- Learning Agility
 - Root cause analysis
 - Teamwork
 - Analytical Thinking
-

Projects:

Real-Time Human Detection System Using YOLOv8- Machine Learning | 2024

- Developed an advanced real-time human detection system using the YOLOv8n object detection model, integrated with a live camera feed. This project aimed to enhance security and monitoring capabilities in various environments, such as public spaces and private premises. **Link:** [Human Detection System](#)

Library Management System – Java Backend | 2025

- Developed a robust Library Management System using Java and Spring Core, designed to efficiently manage book records and library operations. The project focused on implementing CRUD functionalities, applying dependency injection, and following modular backend architecture to improve maintainability and scalability. **Link:** [Library Management](#)

Customer Churn Analysis – Power BI | 2025

- Designed an end-to-end Customer Churn Analysis project built using a telecom dataset and visualized through interactive Power BI dashboards. This project helps identify churn patterns, customer risk factors, and service-level impacts to support data-driven business decisions. **Link:** [Customer Churn Analysis](#)
-

Internships:

Data Science Intern - Postulate Info Tech Pvt Ltd, Coimbatore | February - 2024

- Developed an image recognition model using Python, TensorFlow, and OpenCV and performed data preprocessing, feature engineering, and neural network modelling to improve prediction accuracy.
-

Certifications & Achievements:

- Securing FIRST Position in Project Expo in the domain of OpenCV - SKCT.
- Completed NPTEL course on Data Structures and Algorithms using Java with 57% and Machine Learning with 61%.
- LEETCODE – Solved 650+ problems with streak of 450+ days.
- TNPCB Chennai - Finalist – Bag-It Challenge Hackathon (Top 10) and IBM Bangalore – Finalist – Datathon(Top 50).
